

MULTIMUXA

The Next Generation in DAB+ Multiplexing

MultiMuxa is the complete DAB management system for all broadcasters, no matter the level of expertise. The cutting-edge platform is designed to provide operators with a superior user experience to better manage their DAB services:

Audio and data profiles avoids repetition in building a DAB ensemble as multiple services can subscribe to a template of parameters, including *data rate*, *protection level*, and *X-PAD allocation*.

Multi-ensemble operation allows a given service to be assigned to more than one ensemble, making the overall orchestration of DAB multiplexes a simplified and efficient process.

Additionally, MultiMuxa provides **secure access via two-factor authentication**, **advanced redundancy** for audio input and EDI output with automated switching, **service linking**, **advanced FIC functions** and **emergency warning system**.

FEATURES

-  **Simplified management of DAB ensembles via a web GUI or API**
-  **Highly scalable for additional encoders and multiplexes**
-  **Modern system architecture for secure operation**
-  **Multi-user access for individual content control**
-  **Dolby encoding for up to 36 DAB+ services**
-  **Event History for service reporting**

Please refer to the **MultiMuxa Data Sheet** for supported audio and data inputs and operation environment
